

Big data answers. Nothing leaves your computer.

Marigold lets anyone open a massive spreadsheet — millions of rows — right in their web browser, find what matters, and share a trustworthy report. No installs, no uploads, no data science degree.

WHY PEOPLE CHOOSE MARIGOLD

Private by design

Your files are analyzed on your own machine. They are never sent to a cloud server, so sensitive records stay yours.

Proof, not just claims

Every report carries a digital fingerprint. If anyone changes a single number, the fingerprint no longer matches — tampering is obvious.

Plain-language findings

Ready-made checks surface anomalies and turn them into clear charts and written briefings you can hand to a board or the public.

Fast with huge files

A professional-grade analysis engine runs inside your browser, handling files that freeze ordinary spreadsheet apps.

Works offline, saves locally

Link a *Marigold_Local* folder and your work is saved to your own computer. Reports open anywhere, even without internet.

Desktop and mobile

Read and share reports from a laptop or phone. Locked-down, encrypted storage protects your work on shared devices.

HOW IT WORKS

01

Open

Drop in a spreadsheet or try the built-in sample. Nothing uploads.

02

Explore

Run guided checks or ask questions; see charts instantly.

03

Prove

Marigold fingerprints the data and every step taken.

04

Share

Download a self-contained report, host it on your profile, or publish to Pipes.

WHO IT'S FOR

Civic & election officials

Audit public records without exposing personal information.

Journalists & researchers

Back every story with evidence readers can verify.

Advisors & organizations

Deliver living, verifiable reports instead of static PDFs.

BETTER TOGETHER: MARIGOLD + PIPES

Marigold works on its own. Connect it to **Pipes** — a library of verified knowledge — and your findings go further:

- **Publish once, reach everywhere:** turn a finding into a Pipes story that readers, apps, and AI assistants can cite.
- **Timestamped ownership:** seal your report with a public, permanent timestamp proving it existed — and was yours — on that date.
- **Get paid for your work:** curators earn a share each time their verified data is used.
- **One click from reading to doing:** see a Pipes story, open its data live in Marigold, and check it yourself.
